Introducing:
THE COFFEE ALARM CLOCK
The ap America deserves
Who here struggles to get their ass out of bed in the morning?

(don’t lie guys, we’ve all been there)
Think of your normal tricks for waking up

Parents or friends banging on your door? Water to the face? Harkening to the cries of your full bladder? Questioning your failure as a human being to the extent that you sit upright in a panic?

(Or perhaps you're one of those weird morning people. If so, congrats on winning at life, and go fuck yourselves)
It may look something like this:
Now ask yourself:

Is this really the person I want to be?
Do I want to live in a world where all of my mornings are this awful for the rest of my insignificant life?
DEAR GOD IS THERE ANY HOPE FOR MY SAD SOUL?!?!
Oh calm the fuck down.

Don’t get so carried away. Of course there is!
You could try this:

Mr. Coffee® Smart Optimal Brew™ 10-Cup Programmable Coffee Maker with Wemo®, BVMC-PSTX91WE

Brew a cup from anywhere! Works with your smart device and the free WeMo™ App to schedule or adjust brew time and set up reminders so coffee is fresh and hot whenever you want it.

NEW! Now you can use IFTTT to connect apps, websites, and devices together to perform custom tasks according to the "Recipes" that you create. Find out more here.

But...

What about this motivates you to get your ass out of bed in the morning?

*hint: nothing, nice try Mr Coffee*
Introducing the Coffee Alarm Clock!

Be miserable no longer! This app motivates you to get out of bed by brewing you coffee, and reminding you how much you suck at life so that you don’t have to!

Because whose brain really wants to be that eloquent at 8am?
With a tap of the “Brew” button, a signal is sent over wifi to the machine. Each alarm that sounds shows the user the heat of the coffee and a heartfelt message. This motivates the user to get out of bed and start the day.

Easy right?
Your coffee is brewing

The Tech

The app works with our original patented SuperTech 2000 Coffee Maker, or with Keurig after a software update.

The carafe has a built-in heat sensor that syncs with the machine.

The machine also knows when the water and coffee grounds get low, and sends a reminder to your phone.
Cool right?
